If you smell gas:
Do not try to light any appliance. Do not touch any electrical switch.

Call the Gas Emergency Helpline at TRANSCO on: **0800 111999**

In the Republic of Ireland, call the Bord Gáis emergency line on **1850 205050** or contact your local gas supplier.

---

The Gas Consumer Council (GCC) is an independent organisation which protects the interests of gas users. If you need advice, you will find the telephone number in your local telephone directory under Gas.

The appliance must be installed (and serviced) by a Corgi registered approved installer or a person competent to ensure that the installation is in accordance with “The Gas Safety (Installation and Use) Regulations 1994”, and the “The Gas Safety (Installation and Use) (Amendment) Regulations 1996”. Failure to comply with these Regulations is a criminal offense.

New World Customer Care ................................. back cover

Please keep this handbook for future reference, or for anyone else who may use this appliance.
Introduction

Thank you for choosing a New World appliance
We hope that the following information will help you to familiarise yourself with the features of the appliance, and to use it successfully and safely.
Our policy is one of constant development and improvement. Strict accuracy of illustrations and specifications is not guaranteed. Modification to design and materials may be necessary subsequent to publication.

This appliance must be installed in accordance with the regulations in force and only in a well ventilated space. Read the instructions before using or installing this appliance.

Your 1st Year Guarantee
To fulfil the conditions of your guarantee, this appliance must be correctly installed and operated, in accordance with these instructions, and only be used for normal domestic purposes.
Please note that the guarantee, and Service availability, only apply to the UK and Republic of Ireland.

This appliance is designed to be installed only at low level - ie; underneath a worktop - it can be installed either into a housing unit, or between base units.

Gas & Electrical connection
Please refer to installation instructions for the Gas & Electrical Safety Regulations and the Ventilation Requirements.
In your own interest, and that of safety, it is the law that all gas appliances be installed by a competent person who will ensure that the installation is in accordance with “The Gas Safety (Installation & Use) Regulations”, & the “The Gas Safety (Installation & Use) (Amendment) Regulations”. Failure to comply with these Regulations is a criminal offense.
Corgi registered installers undertake to work to satisfactory standards.
Disconnection of gas and electric appliances should always be carried out by competent persons.

Warning: This appliance must be earthed.

In the event of a power cut
1. Switch off the electricity to the appliance at the socket.
2. When the power returns, see the ‘Programmer / Clock’ section to ‘Set the time of day’.
Introduction

The cooling fan
The cooling fan helps to keep the exterior cool during normal use. When a burner is operated, you should hear the cooling fan switch on automatically and be able to feel air evacuating from the appliance vents just below the fascia. The cooling fan will continue to operate for approximately 10 minutes after turning off the burners. This is normal.
If there is no such indication that the fan is operating, the appliance will require servicing. DO NOT USE THE APPLIANCE UNTIL IT HAS BEEN SERVICED. Switch the appliance off at the mains and contact Customer Support.

For your safety
This appliance has a built in safety device to isolate the gas and electric supplies to various components in the event of fan failure.
If the minute minder and lights do not function, and the ignition system stops working, the safety device has operated. Within an hour the safety device will reset itself and the minute minder display will flash.
To reset the minute minder, simply press the reset button and set the time of day within 5 seconds by pressing the “+” plus and “−” minus buttons.

If when a burner control is turned on, the fan does not operate in the normal way, then the appliance will require servicing. DO NOT USE THE APPLIANCE UNTIL IT HAS BEEN SERVICED. Switch the appliance off at the mains and contact Customer Support.
Continued use of the appliance without it being serviced could result in excessive temperatures being generated, which in turn could reduce the life of certain components.

Ventilation
The use of a gas cooking appliance results in the production of heat and moisture in the room in which it is installed. Ensure that the kitchen is well ventilated; keep natural ventilation holes open or install a mechanical ventilation device (mechanical ventilator).
Prolonged intensive use of the appliance may call for additional ventilation, for example opening a window, or more effective ventilation, for example increasing the level of mechanical ventilation where present.
This appliance is not connected to a combustion products evacuation device. It must be installed and connected in accordance with current installation regulations. Particular attention must be given to the relevant regulations regarding ventilation.
Introduction

**Glass door panels**

To meet the relevant Standards of Domestic cooking appliances, all the glass panels on this appliance are toughened to meet the fragmentation requirements of BS3193. This ensures that, in the unlikely event that a panel breaks, it does so into small fragments to minimise the risk of injury.

Please take care when handling, using or cleaning all glass panels as any damage to the surfaces or edges may result in the glass breaking without warning or apparent cause at a later date. Should any glass panel be damaged, we strongly recommend that it is replaced immediately.

**Condensation**

When hot and cold air meet, condensation forms. The outer door is air cooled and the inner door gets hot, so some condensation might form; this is normal and will disappear within a few minutes minutes.

**Before using the appliance** for the first time, remove any protective polythene film and wash the oven shelves in hot soapy water to remove their protective covering of oil. Even so, when you first switch on the oven or grill you may notice a smell and some smoke.

**Environmental Protection**

New World is committed to protecting the environment and operates an Environmental Management System which complies with BS EN ISO 14001:1996.

**Disposal of packaging**

- All our packaging materials are recyclable and environmentally friendly.
- Please help us to protect our environment by disposing of all packaging in an environmentally friendly manner.
- Please contact your local authority for the nearest recycling centre.

**Caution:** Packaging materials can pose a risk of suffocation - keep away from children.

**To replace a light bulb** (if fitted)

**Caution:** Switch off the electricity supply to the appliance, to avoid the risk of electric shock.

Wait until the oven is cool, then remove the shelves.

Unscrew the lens cover (turn anticlockwise). Unscrew the bulb and replace. Replace lens cover.

Please note that light bulbs are not covered by guarantee.
Be Safe - Not Sorry

When you are cooking, keep children away from the vicinity of the appliance.
This product is designed as a domestic cooking appliance for the preparation and cooking of domestic food products, and should not be used for any other purpose.

- Remove all packaging from the appliance before using for the first time.
- Make sure you read and understand the instructions before using the appliance.
- Keep electrical leads short so they do not drape over the appliance or the edge of the worktop.
- Keep all flammable materials (such as curtains, furnishings & clothing) away from the appliance.
- Parts of the appliance may be hot during or immediately after use. Allow sufficient time for the appliance to cool after switching off.
- Do not drape tea towels over the flue vents or doors, as this creates a fire hazard.
- Do not use aluminium foil to cover the grill pan, or put items wrapped in foil under the grill, as this creates a fire hazard.
- Never use the appliance for heating a room.
- Do not use the oven with the door inner glass panel removed (glass oven doors only).

- Use oven gloves when removing hot food / dishes from the oven or grill. The oven / grill and utensils will be very hot when in use.
- When opening the appliance door, take care to avoid skin contact with any steam which may escape from the cooking.
- Do not use foil on oven shelves or allow it to block the oven flue, as this creates a fire hazard, and prevents heat circulation.
- When cooking heavy items - eg; turkeys - do not pull the oven shelf out with the item still on the shelf.
- Switch off the electricity supply before replacing the oven light bulb, to avoid the possibility of electric shock.
- All installation, servicing and maintenance work must be carried out by a competent person who will comply with current Regulations, Standards and Requirements.

**Warning:** This appliance must be earthed.

**When you have finished cooking check that all controls are in the off position.**

As with all gas appliances, it is recommended that your appliance is serviced regularly.
Using the Grill

Caution: Accessible parts may be hot when the grill is used, young children should be kept away.

Grill ignition

Important: The door must be fully open when the grill is used.

Open the door.

Push in and turn the grill control knob to the “on” position and hold in. Do not hold in for longer than 15 seconds. If the burner is not lit after 15 seconds, release the control knob and wait one minute before attempting further ignition.

Ensure that the grill burner is alight before leaving it unattended.

To switch off, turn the control knob anti-clockwise to return it to the “○” off position.

Preheating

For best results, always preheat the grill for a few minutes before grilling.

Aluminium foil

Never cover the grill pan or grill grid with cooking foil, or allow fat to build up in the grill pan, as this creates a fire hazard.
Using the Grill

Using the grill
Push the grill pan towards the back of the shelf, to position it under the grill. Variation in grilling can be achieved by setting the grill between the large and small flame symbols, or by moving the grill pan up or down.

Important: Never operate the grill between the large flame and the off position.
The grill grid, inside the grill pan, can be inverted to give a high or low position, or it may be removed.
Always use the top shelf position for fast toasting.
When you have finished grilling, check that the control knob is returned to the off position.
Using the Oven

When you are cooking, keep children away from the vicinity of the oven.

Oven ignition
Push in and turn the oven control knob anticlockwise to gas mark 9.
Hold the control knob in for 15 seconds. Do not hold the control knob in for longer than 15 seconds, if the oven is not ignited after 15 seconds, release the control knob and wait one minute before attempting further ignition.
When the oven is switched on the oven light will come on automatically.
The automatic ignition will continue to spark for a short time after the burner has lit until the flame is established.
Adjust to the required setting.
To switch off, return the control knob to the “0” off position.

Zones of heat
The temperature at the centre of the oven corresponds with the selected gas mark and is slightly higher towards the top of the oven and slightly lower towards the oven base.
These zones of heat can be useful as different dishes requiring different temperatures may be cooked at the same time - e.g; the temperature at the oven base is suitable for cooking baked vegetables, baked fruit, milk pudding, etc, and for warming bread rolls, soup, coffee, or ovenproof plates and dishes.

Preheating
The oven must be preheated for 15 minutes when reheating frozen or chilled food, and we recommend preheating for yeast mixtures, batters, soufflés and whisked sponges.
If you are not preheating the oven, the cooking times in the Baking Guide may need to be extended, as they are based on a preheated oven.

Notes:
In the event of the burner flames being accidentally extinguished, turn off the burner control and do not attempt to reignite the burner for at least one minute.
If it is found over a period of time that the oven becomes hotter when used at a particular gas mark, the thermostat may need to be replaced.
As part of the cooking process, hot air is expelled through a vent at the top of the oven. When opening the oven door, care should be taken to avoid any possible contact with potentially hot air, since this may cause discomfort to people with sensitive skin. We recommend that you hold the underneath of the oven door handle.
Cleaning

**Oven furniture**

**Oven shelves**
The oven shelf must be positioned with the upstand at the rear of the oven and facing upwards.
Position baking trays and roasting tins on the middle of the shelves, and leave one clear shelf position between shelves, to allow for circulation of heat.

**Baking tray and roasting tins**
For best cooked results and even browning, the maximum size baking trays and roasting tins that should be used are as follows:

- **Baking tray** 350mm x 280mm
  This size of baking tray will hold up to 20 small cakes.
- **Roasting tin** 370mm x 320mm
  We recommend that you use good quality cookware. Poor quality trays and tins may warp when heated, leading to uneven baking results.

**Slow cooking**

- Make sure that frozen foods are thoroughly thawed before cooking.
- Do not slow cook joints of meat or poultry weighing more than 2 1/4 kg / 4 3/4 lb.
- For roasting joints of meat or poultry and for pot roasts preheat the oven to gas mark 6 and cook for 30 minutes, then adjust the oven control to ‘S’ slow set for the remainder of the cooking time.
- Always use the top half of the oven when slow cooking.
- Slow cooking times will be about three times as long as conventional cooking times.
- Do not open the oven door unnecessarily during slow cooking, as this will result in heat loss at low temperatures.
- Always use dishes with tightly fitting lids. To rectify badly fitting lids, place foil over the dish underneath the lid.
Using the Oven

**Cooking frozen & chilled foods**
- Preheat the oven.
- When cooking frozen or chilled foods, please follow the manufacturer’s instructions. If cooking more than one tray or item, cooking times may need to be increased.
- Please ensure that foods are piping hot before consumption.
- Always use the temperature setting stated on food packaging when cooking convenience food.
- Never overload the tray - eg; oven chips should be placed onto the baking tray in one even layer for satisfactory cooking.
- Follow the cooking times given on packaging but remember they are only intended as a guide and do not take individual preferences into account.
- Always cook frozen convenience foods straight from the freezer unless packaging advises otherwise.

**Baking guide - hints**

Cooking times for pastry dishes depend on the size and type of cooking dish and also the filling.

When cooking 2 trays of items, remove the top item when it is cooked and raise the lower item to the higher shelf to finish cooking, or where additional browning of the base is required - eg; pies and pastries - interchange part way through cooking.

Using the Oven

Traditional fruit cakes
It should be remembered that ovens can vary over time, therefore cooking times can vary, making it difficult to be precise when baking fruit cakes.
It is necessary, therefore, to test the cake before removal from the oven. Use a fine warmed skewer inserted into the centre of the cake. If the skewer comes out clean, then the cake is cooked.

☐ Do not attempt to make Christmas cakes larger than the oven can cope with; you should allow at least 25 mm (1 inch) space between the oven walls and the tin.

☐ Always follow the temperatures recommended in the recipe.

☐ To protect a very rich fruit cake during cooking, tie 2 layers of brown paper around the tin.

☐ We recommend that the cake tin is not stood on layers of brown paper, as this can hinder effective circulation of air.

☐ Do not use soft tub margarine for rich fruit cakes unless specified in the recipe.

☐ Always use the correct size and shape of tin for the recipe quantities.

Roast turkey
Roasting turkey perfectly involves cooking two different types of meat - the delicate light breast meat, which must not be allowed to dry out, and the darker leg meat, which takes longer to cook.

The turkey must be roasted long enough for the legs to cook, so frequent basting is necessary. The breast meat can be covered once browned.

☐ Turkey should be roasted at gas mark 4 for 20 minutes per 1 lb, plus 20 minutes unless packaging advises otherwise.

☐ The turkey can be open roasted, breast side down, for half of the cook time, and then turned over for the remainder of the cooking time.

☐ If the turkey is stuffed, add 5 minutes per 1 lb to the cooking time.

☐ If roasting turkey covered with foil, add 5 minutes per 1 lb to the cooking time.

To test if the turkey is cooked, push a fine skewer into the thickest part of the thigh. If the juices run clear, the turkey is cooked. If the juices are still pink, the turkey will need longer cooking.
Using the Oven

Roasting guide
The times given in the roasting guide are only approximate, because the size and age of the bird will influence cooking times as will the shape of a joint and the proportion of the bone. Frozen meat should be thoroughly thawed before cooking. For large joints it is advisable to thaw overnight.
Frozen poultry should be thoroughly thawed before cooking. The time required depends on the size of the bird - eg; a large turkey may take up to 48 hours to thaw.
Use of a grid with a roasting tin will reduce fat splashing and will help to keep the oven interior clean. Alternatively, to help reduce fat splashing, potatoes or other vegetables can be roasted around the meat / poultry.

Notes:
- When cooking stuffed meat or poultry calculate the cooking time from the total weight of the meat plus the stuffing.
- For joints cooked in foil or covered roasters, and for lidded casseroles, add 5 minutes per 450g (1 lb) to the calculated cooking time.
- Smaller joints weighing less than 1.25kg (2½ lb) may require 5 minutes per 450g (1 lb) extra cooking time.
- Position the oven shelf so that the meat or poultry will be in the centre of the oven.
- It is recommended that the appliance is cleaned after open roasting. Allow the appliance to cool before attempting to clean it.

Minute Minder

Initial display

The digital timer enables you to set the time of day (24 hour clock) and the minute minder alarm.

Setting the time of day
1. Switch on the electricity supply to the appliance.
2. Press and release the function button.
3. Set the time of day, using the plus and minus buttons.
4. The time will be set 7 seconds after the last plus or minus operation.

Changing the time of day
1. Press the function button once.
2. Set the time of day, using the plus and minus buttons.
3. The time will be set 7 seconds after the last plus or minus operation.

Alarm tones
After setting the time of day, you can select one of three alarm tones.
Press the minus button to listen to the first tone, then release the minus button and press again to listen to the second tone, etc.
Releasing the minus button after a tone has sounded will automatically select that tone.

Setting the minute minder
1. Press and release the plus button, to change the display from clock to minute minder - the bell symbol will light.
2. Use the plus and minus buttons to set the length of time before the alarm tone will sound. The display will increase / decrease in units of 10 seconds up to 99 minutes, 50 seconds, and in units of 1 minute from 1 hour 40 minutes upwards. The maximum period which may be set is 10 hours.
The display format will change after 99 minutes and 50 seconds to 1 hour and 40 minutes.
During countdown, the minute minder has priority on the display, which will show (in minutes : seconds, or hours : minutes) the time remaining.
When countdown is complete, the tone will sound for 7 minutes, or it can be reset with one touch of any button.

To cancel the minute minder at any time.
Run down the set time with the minus button. The display will show the time of day.
Cleaning

Caution: Any cleaning agent used incorrectly may damage the appliance.
Always let the appliance cool before cleaning.

Some cooking operations generate a considerable amount of grease. This, combined with spillage, can become a hazard if allowed to accumulate on the appliance through lack of cleaning. In extreme cases this may amount to misuse of the appliance and could invalidate your guarantee.

It is recommended that the appliance is cleaned after open roasting.
Do not use caustic pastes, abrasive cleaning powders, coarse wire wool or any hard implements, as they will damage the surfaces.
All parts of the appliance can be safely cleaned with a cloth wrung out in hot soapy water.

Glass parts

FACIA PANEL & DOOR PANELS
Use a mild cream cleaner - eg; “Cif”. Rinse thoroughly and dry with a soft cloth. Do not use abrasive cleaners or polishes.

To remove the glass panel for cleaning, open the door to the door stop position (about 30° open), hold the top and bottom edges of the panel and slide out. Note that if the door is opened fully when removing the inner door glass panel, the door may spring shut.

Important: if the inner door glass panel is removed for cleaning, it must be replaced the right way up as shown, and pushed fully in to the stop position.
Cleaning

Vitreous enamel parts
GRILL PAN & GRILL COMPARTMENT, OVEN COMPARTMENT FLOOR
Use a mild cream cleaner - eg; “Cif”. Stubborn marks may be removed with a moistened “Brillo” pad.
The grill pan may be cleaned in a dishwasher, or with a nylon brush in hot soapy water.

Chrome plated parts
OVEN SHELVES & OVEN SHELF RUNNERS, GRILL PAN GRID
Do not use abrasives or polishes. Use a moist soap pad.
Shelf runners can be removed for cleaning. Grasp the runners, and slide out of the hanging holes as shown.
Note: These items may also be cleaned in a dishwasher.

Painted, plastic and metal finish parts (if fitted)
OVEN DOOR FRAME & HANDLE, METAL FASCIA PANEL, CONTROL KNOBS
Only use a clean cloth wrung out in hot soapy water.

Stainless Steel surfaces (stainless steel finish models only)
FACIA PANEL, HANDLES, DOOR PANELS
Only use a clean cloth wrung out in hot soapy water, and dry with a soft cloth.
Stubborn marks can be removed using a stainless steel cleaner. We recommend that you clean the whole of the stainless steel area to maintain a uniform finish.
Do not use undiluted bleach or any products containing chlorides as they can permanently damage the steel.
Extra care should be taken when cooking food in salted water. Some foods are corrosive - eg; vinegar, fruit juices and especially salt - they can mark or damage stainless steel if they are left on the surface. Turn off and wipe any spillage immediately, taking care to avoid skin contact with any hot surface or spillage.
Sharp objects can mark the surface of stainless steel, but marks will become less noticeable with time.
To maintain the finish of the stainless steel, or to remove any greasy marks, wipe the stainless steel surface sparingly with a minimum amount of Baby Oil and kitchen paper.
Do not use cooking oils, as these may contain salt, which can damage the stainless steel surface.
Installation Instructions

Before you start: Please read the instructions. Planning your installation will save you time and effort.

Prior to installation, ensure that the local distribution conditions (nature of the gas and gas pressure) and the adjustment of the appliance are compatible. The adjustment conditions are stated on the data badge.

This appliance is not connected to a combustion evacuation device. It shall be installed and connected in accordance with current installation regulation. Particular attention shall be given to the relevant requirements regarding ventilation.

In your own interest and that of safety, it is the law that all gas appliances be installed and serviced by competent persons. CORGI registered installers undertake to work to satisfactory standards.

Where regulations or standards have been revised since this handbook was printed, always use the latest edition.

In the UK the regulations and standards are as follows:
2. Building Regulations - Issued by the Department of the Environment.
3. Building Standards (Scotland) (Consolidated) - Issued by the Scottish Development Department.
4. The current I.E.E. Wiring Regulations.
5. Electricity at Work Regulations 1989.
6. BS 6172 Installation of Domestic Gas cooking Appliances
7. Installation & Servicing Instructions for this appliance.

For installation in countries other than the UK, the appliance must be connected in accordance with all local gas and electrical regulations. In the Republic of Ireland, Installers should refer to IS813 Domestic Gas Installations.

Ventilation Requirements

The room containing the appliance should have an air supply in accordance with BS 5440: Part 2: 1989:
- All rooms require an openable window, or equivalent, and some rooms will require a permanent vent as well.
- For room volumes up to 5m³ an air vent of 100cm² is required.
- If the room has a door that opens directly to the outside, or the room exceeds 10m³, NO AIR VENT is required.
- For room volumes between 5m³ and 10m³ an air vent of 50cm² is required.
- If there are other fuel burning appliances in the same room, BS 5440: Part 2: 1989 should be consulted to determine the air vent requirements.
- This appliance must not be installed in a bed sitting room of less than 20m² or in a bathroom or shower room.

Windows and permanent vents should therefore not be blocked or removed without first consulting a CORGI gas installer.

In the Republic of Ireland, refer to relevant Irish Standards for correct ventilation requirements.

Failure to install appliances correctly is dangerous and could lead to prosecution.

This appliance is not connected to a combustion products evacuation device. It shall be installed and connected in accordance with current installation regulations. Particular attention shall be given to the relevant requirements regarding ventilation.
Installation Instructions - NW60G

Step 1: Prepare installation

Do not lift the appliance by the door handle.

Whilst every care is taken to eliminate burrs and raw edges from this product, please take care when handling - we recommend the use of protective gloves during installation.

Please note that the weight of this appliance is approximately 31kg (unpacked). Take care when lifting it into the housing unit - always use an appropriate method of lifting.

Remove the fixing screws from the polythene bag on the top of the appliance, but leave the appliance in the base tray packaging until you are ready to install it.

If this appliance is to be installed near to a corner where the adjacent cabinets run at right angles forward of the appliance, there must be a gap of at least 90 mm between the appliance and the cabinets, to prevent overheating of the cabinets.

Housing dimensions

The appliance is designed to fit into a standard 600mm wide housing unit with minimum internal dimensions as shown.

591mm is to the underside of the worktop when the appliance is built under, or to the underside of the panel above, when the appliance is installed into a tall housing unit.
Installation Instructions - NW60G

i) When installed in a typical 600mm deep built in housing unit, the false back should be removed from the housing unit to provide the necessary depth for installation.

ii) When the false back is removed, it is normally the case that the support shelf for the appliance leaves a gap between the back edge and the wall of approximately 80mm.

iii) If no gap occurs between the back edge of the shelf and the wall behind the unit, we recommend that a gap of at least 30mm is made by shortening the shelf.

iv) When installing the appliance below a worktop, there must be a minimum ventilation area of 60cm² below the appliance, in either area (1) or (2), as indicated below. There must be a 5mm gap between the front top edge of the oven and the underside of the worktop.

**Important:** Do not modify the outer panels of this appliance in any way. Ensure that you route all mains electrical cables and flexible tubing well clear of any adjacent heat source, such as an oven, grill or hob. Ensure that all pipe work is of the correct rating for both size and temperature.

---

**Installing the appliance under a worktop**

Where the appliance is installed under a worktop, with a hob installed above it, the installation instructions for the hob must be read in conjunction with these instructions.

For connecting to the gas supply and electricity supply see page xx.
Installation Instructions - NW70G

Before you start - please read the instructions carefully - planning your installation will save you time and effort. Look at the different ways the appliance can be installed - as shown on the following pages - and plan the installation to suit your situation.

Leave the appliance in the base tray packaging until you are ready to install it. When you remove the appliance from the base tray packaging, take care not to damage it.

Whilst every care is taken to eliminate burrs and raw edges from this product, please take care when handling - we recommend the use of protective gloves during installation.

Please note that the weight of this appliance is approximately 47kg (unpacked). Take care when lifting it into the housing unit - always use an appropriate method of lifting.

This appliance must be installed only at low level - ie; under a worktop. The controls have been designed for viewing at a low level, and it should therefore not be installed at high level.

Please note that all dimensions and sizes given are nominal, some variation is to be expected.

If this appliance is to be installed near to a corner where the adjacent cabinets run at right angles forward of the appliance, there must be a gap of at least 90mm between the appliance and the cabinets, to prevent overheating of the cabinets.

Important: Do not modify the outer panels of this appliance in any way.

Fixing screws - The fixing screws are in a polythene bag in the oven pack. Depending on the method of installation, some of the screws may not be needed.

Step 1: Prepare for installation

There are 3 methods of installing the appliance:

Method 1: Into a space between two base units, ie; without a housing unit.

Method 2: Into a housing unit, with an internal height of less than 710mm, which can be modified to obtain the required dimensions.

Method 3: Into a housing unit, with an internal height of 710mm or more.

If you have a non standard size of cabinet which leaves a gap above or below the appliance, you may be able to buy a trim kit to fill in the gap from the supplier of your cabinets.

Installation Instructions- NW70G

Method 1: Without housing unit (between 2 base units)
Before installing the appliance, check the internal dimensions as shown. The space for the appliance must be clear of obstruction. You may have to cut into or remove any rear cross members to obtain the 550mm minimum depth.

The Fixing Kit
Should you need a replacement fixing kit please call:
0870 458 9961 and order part number: 01 28287 00.

In the fixing kit you will find 2 side trims (687mm long) and 4 runners (420mm long). The fixing screws are in a polythene bag in the oven.

1. Take the 6 No 8 x 12mm (silver) self tapping screws from the polythene bag, and use them to fit one runner to each side of the appliance.
2. Make sure they are the right way up as shown.
3. Take one of the side trims, hold it against the side of the base unit, and mark off 687mm from the top edge of the base unit, to the top edge of the runner.
   Note: This ensures a 5 - 8mm clearance from the underside of the worktop to the top of the appliance.
4. Measure 50mm from the front edge of the base units, to mark the front edge of the runners.
5. Take 6 of the No 8 x 12mm (Black) chipboard screws and screw the runners into opposition the right way up as shown.
6. Fit the side trims to be flush to the top and front edges of the base units, using the remaining 6 No 8 x 12mm (Black) chipboard screws.
Installation Instructions - NW70G

**Method 1:** Without housing unit (between 2 base units)
*Shown with fixing kit*

![Diagram showing installation instructions for NW70G with method 1 details]
Installation Instructions- NW70G

Method 1: Without housing unit (between 2 base units)
Shown without fixing kit
Installation Instructions- NW70G

Method 2: Housing unit with internal height less than 710mm.
Note: You will not need the 2 side trims (687mm long) or the appliance runners for this installation. You will need the 2 runners to fix to the adjacent cabinets.

Before you start:
Before removing the bottom shelf or modifying the housing unit, make sure that it will remain structurally sound, eg; by fixing to adjacent cabinets, floor or worktop.
You may have to cut into or remove any rear cross members to obtain the 550mm minimum depth.
To obtain the required 710mm height, you may have to lower or remove the bottom shelf - remove any cross rails and reposition brackets.

To fix the runners (if required)
1. Take the side trims, hold it against the side of the base unit, and use it to mark off the 687mm from the top edge of the side unit, to the top edge for the runner.
Note: This ensures a 5 - 8mm clearance from the underside of the worktop to the top of the appliance.
2. Measure 50mm from the front edges of the base units, to mark the front edge for the runners.
3. Take 6 of the No 8 x 12mm (Black) chipboard screws and screw the runners into position the right way up as shown.
4. If necessary, adjust the height of the plinth to just below the bottom edge of the runners.

If you require a replacement fixing kit please call 0870 458 9961 and order part number 01 28287 00.
Installation Instructions - NW70G

*Shown with fixing kit*

- Min 550mm
- 560 - 570mm
- 687 mm
- 710mm
- Runners
- 50mm
Installation Instructions- NW70G

**Method 2:** Housing unit with internal height less than 710mm
Shown without fixing kit

![Diagram of installation instructions](image-url)
**Method 3:** Housing unit with internal height 710mm or more

*Note:* You will not need the 4 runners and 2 trims that are packed with the oven for this installation.

Remove any fixings that may prevent entry of the oven into housing, or obstruct the gas inlet pipe. The cabinetry should be kept structurally sound by fixing to adjacent cabinets, floor or worktop.

1. When installed in a typical 600mm deep built in housing unit, the false back should be removed from the housing unit to provide the necessary depth for installation.

2. When the false back is removed, it is normally the case that the support shelf for the appliance leaves a gap between the back edge and the wall of approximately 80mm.

3. If no gap occurs between the back edge of the shelf and the wall behind the unit, you must create a gap of at least 30mm by shortening the shelf.

---

*Figures and diagrams are not visible in the text.*
Installation Instructions - NW90G

Step 1: Prepare installation
Do not lift the appliance by the door handle.
Remove the fixing screws from the polythene bag on the top of the appliance, but leave the appliance in the base tray packaging until you are ready to install it.
Whilst every care is taken to eliminate burrs and raw edges from this appliance, please take care when handling - we recommend the use of protective gloves during installation.
Please note that the weight of this appliance is approximately 48kg (unpacked). Take care when lifting it into the housing unit - always use an appropriate method of lifting.
Note: When removing the appliance from the base tray packaging care should be taken to ensure the appliance is not damaged.

Siting the appliance
If this appliance is to be installed near to a corner where the adjacent cabinets run at right angles forward of the appliance, there must be a gap of at least 90mm between the appliance and the cabinets, to prevent overheating of the cabinets.
When installed in a typical 600mm deep built in housing unit, the false back should be removed from the housing unit, to provide the necessary depth for installation.

When the false back is removed, it is normally the case that the support shelf for the appliance leaves a gap between the back edge of the support shelf and the rear wall of approximately 80mm.
If no gap occurs between the back edge of the shelf and the wall behind the unit, you must create a gap of at least 30mm by shortening the shelf and any other shelf below the appliance.
Cut 12mm from the top of any plinth that may be fitted (see diagram).

Important: Do not modify the outer panels of this appliance in any way.
Installation Instructions - NW90G

Dimensions
The appliance is designed to fit into a standard 600mm wide housing unit, with minimum internal dimensions as shown.

Note: All sizes are nominal, some variation is to be expected.
General Installation Instructions

Step 2: Connect to gas supply

1. The inlet to the appliance is ISO 7 - Rp ½" internal thread situated towards the top right corner of the rear.

2. Fit the bayonet connection to the wall in the shaded area as shown. The shaded area shown is applicable to installations in minimum depth cabinets. If more room is available, the bayonet fixing area can be extended, provided that the flexible tube does not obscure the fan intake.

3. Use a 900mm - 1125mm length of flexible connector. The flexible connector shall be fitted such that it cannot come into contact with a moveable part of the housing unit (eg; drawer) and does not pass through any space susceptible of becoming congested. Make sure that the flexible connector does not block the cooling fan inlet.

4. Flexible connections should be to BS669. Parts of the appliance likely to come into contact with a flexible connector have a temperature rise less than 70°C.

5. Rigid connections must be accessible to disconnect for servicing. Cut a 150mm square hole in the right hand rear corner of the support shelf for the supply pipe.

6. Make sure all connections are gas sound.

**Important:** - ensure that you route all mains and electrical cables and flexible tubing well clear of any adjacent heat source.
General Installation Instructions

Step 3: Connect to the electricity supply

Warning: This appliance must be earthed.
The flexible mains lead is supplied connected to a BS 1363 fused plug, having a fuse of 3 amp capacity.
If this plug does not fit the socket in your home, it should be replaced with a suitable plug as outlined below.

The wires in the mains lead are coloured in accordance with the following code: Green and yellow = Earth, Blue = Neutral, Brown = Live.
As the colours of the wires in the mains lead for the appliance may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows:
1. The wire which is coloured green and yellow must be connected to the terminal marked E (Earth) or coloured Green.
2. The wire which is coloured blue must be connected to the terminal marked N (Neutral), or coloured Black.
3. The wire which is coloured brown must be connected to the terminal marked L (Live), or coloured Red.
The plug and socket must be accessible after installation.
Should the mains lead of the appliance ever require replacing, we recommend that this is carried out by a qualified electrician who will replace it with a lead of the same size and temperature rating.

Step 4: Check edging strip

The edging strip is factory fitted to the front side edges of the appliance front frame. This strip provides the cabinetry with extra protection from any escape of heat.
When installing the product, ensure that the edging strip is correctly located on the outer edges of the front frame, before positioning and securing the appliance to the cabinet.

When securing the appliance, the fixing screws provided are driven through the edging strips into the cabinet - the seal will straighten up and sit flush to the cabinet when the screws are fully home.
General Installation Instructions

Step 5: Secure appliance into housing unit

Note: The unit housing the appliance must be appropriately fixed.

Method 1: Care must be taken to ensure the appliance runners are sufficiently engaged over the top of the runners on the base units.

Method 2: Insert appliance into cabinet - ensure that it is engaged over the top of the side runners.

Method 3: Insert appliance into cabinet.

To secure appliance to housing unit

Note: Ensure that the appliance is centrally located. Take care not to damage the appliance or cabinet.

Note: For installation Method 1, you will need to drill through the fixing holes into the side trims with a 3.2mm diameter drill.

There are 6 securing screws.

1. Open the grill / top oven door, and screw 2 screws through the top corner holes in the front frame.

2. With the grill / top oven door still open, screw 2 screws through the holes in the front frame, located under the grill compartment.

   Close the grill / top oven door.

3. Open the main oven door, and screw the remaining 2 screws through the bottom corner holes in the front frame.

   Close the main oven door.

Step 6: Installing a hob above the appliance

Built under models only

When the appliance is installed under a worktop, with a hob installed above it, the installation instructions for the hob must be read in conjunction with these instructions.

When installing a gas hob above the appliance, care must be taken to ensure that the hob inlet pipe is as close to the back wall as possible, so that it does not obstruct the appliance or the appliance inlet pipe.

If a flexible inlet pipe is used, it must hang vertically and not be trapped between the oven and rear wall.

Important: - ensure that you route all mains and electrical cables and flexible tubing well clear of any adjacent heat source, such as an oven, grill or hob.
**Installation Instructions**

**Step 7: Commissioning**

**Pressure test point**
Use the oven burner. From inside the oven remove the burner cowl. Remove the small screw at the LHS of the burner cradle. Slide the burner to the left to access the injector. Connect manometer to the injector and turn the grill burner to full on to check pressure. Replace in reverse order.

**Burner aeration**
All burners have fixed aeration and no adjustment is possible.

**Pressure setting**
G20 Natural Gas @ 20 mbar

**Electrical systems check**
In the event of an electrical fault the preliminary electrical system check (earth continuity, short circuit, polarity and resistance to earth) must be carried out.

**Ignition**
The automatic ignition continues to spark for a short time after the burner has lit until the flame is established.

**Oven**
1. Push in and turn the control knob anticlockwise to gas mark 9. Hold the the control knob in for 15 seconds. Do not hold the control knob in for longer than 15 seconds, if the oven is not ignited after 15 seconds, release the control knob and wait one minute before attempting further ignition.
2. Adjust to the required setting.
3. The burner may not come on to a full rate unless the oven door is closed.
   The oven burner operates at a low rate for up to 60 seconds until the flame supervision device opens and full gas rate is obtained.

**Grill**
1. The door must be open for the grill burner to ignite.
2. Push in and turn the control knob clockwise to the grill symbol. Hold the the control knob in for 15 seconds. Do not hold the control knob in for longer than 15 seconds, if the grill is not ignited after 15 seconds, release the control knob and wait one minute before attempting further ignition.
3. Check condition of flame at low setting.
When you first turn on the oven or grill you may notice a smell and some smoke which comes from the protective coating of oil burning off from some of the parts.

**Before leaving the installation**
Show the customer how to ignite the oven and grill, and give them this handbook. **THANK YOU.**
